

# DIAGNOSTIC CONSULTATIONS

## Customized Treatment for Pain Management

A diagnostic consultation is usually the important first step to creating a customized treatment plan for the patient. During the diagnostic consultations, Our Pain Management Team will review your medical history, symptoms, medications, x-rays, films, MRIs and other tests to diagnose the source of your pain.

Our Board Certified Pain Physicians use a multidisciplinary approach in designing a treatment plan that will work best for you. Treatment plans often combine multiple forms of treatment to deliver patients relief from chronic pain.

## Improving Quality of Life

Pain is a complex medical problem that can have profound effects on your physical and mental well-being. **Our goal is to help you decrease your level of pain and suffering, to return you to your maximum level of functioning** and independence, and to help you restore your quality of life. Your physician may refer you to our Pain Clinic for evaluation, for one or more specific procedures, or ongoing treatment.

## Individualized treatment plan

The treatment plan developed by our Pain Management team will be specially tailored to your condition and degree of pain, your needs and your personal preferences. Your treatment plan may include a single approach or a combination of different types of therapies: medical therapies, including medications and special procedures; psychological therapies; and rehabilitation therapies.
